- 24/7 non-stop production

6 Paper bag placing (Triple)

Paperbagger

- Up to 42 bags per minute
- 24/7 non-stop production
- Easy and very simple to operate

It's a given that the E-commerce market is growing rapidly. As specific markets ask for specific packaging solutions, we are happy to support you with our automatic (T-shirt) bag placing machines!

What do you need?

Depending on the product that needs to be packed, our machines can place one or more bags in a tote, bin or (polystyrene) box.

How to achieve this?

With 35 years of experience, Niverplast has been improving businesses all over the world with the automation of their packaging procedures.

Research & development and happy customers have been our top one priority. Together, is our key to success.

Whom?

Niverplast's passionate people have developed a variety of compact, efficient and innovative packaging solutions for the E-commerce market.

What machines?

- Your crates can be destacked with our **automatic crate destacker**, then they can be transported to a variety of automatic bag placing machines.
- In case your space is limited, our **SinglePlast** is the solution. It places three bags in one crate and can handle up to 18 bags per minute.
- If you have a bit more space, our **TriPlast** is recommended. It also places three bags in one crate, but uses a different technique and therefore is able to place over 54 bags per minute!
- If you don't find your solution in (closed loop) plastic bags, challenge us. We can also offer you **packaging machines** that place paper bags.

Niverplast is your passionate partner in improving your business!

All machines can operate stand-alone as well as in any automatic production line.

Passionate about E-commerce products

Our bag placing machines don't have hangovers

Increase output. Save on labour.

Closed loop bag recycling

We've always been committed to limiting our impact on the environment, which is why we believe in closed-loop bag recycling.

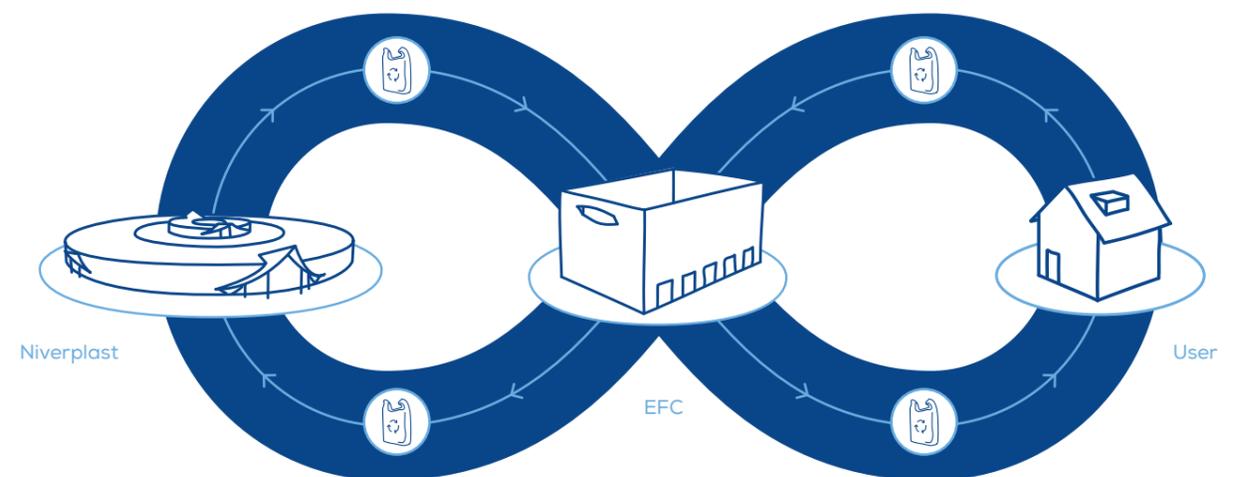

How and where do we recycle the bags that your customers hand back? Every time your customers return your bags to your couriers, they're brought back to your EFC, where they're sorted. The EasyOpen T-Shirt bags are then recycled into new bags, ready for their next delivery.

This all takes place within control of Niverplast at our licensed EasyOpen plastic producing factories, instead of being sent overseas - minimizing carbon emissions from transportation. This is known as closed-loop bag recycling.
